EXECUTIVE SYNTHESIS

Audit of www.coursera.org: Verified 7 core GEO signals (Robots.txt: Block, Sitemap: Pass, Schemas: 2, Headings: 15, Internal Links: 145).

PILLAR 1: SCHEMA ENTITY (40%)

100/100

JSON-LD schema detected. Provides machine-readable facts.

PILLAR 2: DIRECT CHUNKING (35%)

75/100

Evaluates question heading anchors and direct passage answer readability for RAG retrieval.

70/100

Probability of Perplexity & ChatGPT referencing this page as an authoritative cited source.

Quick Wins (Low Effort)

#1 Robots.txt Blocking AI Search Crawlers

Impact: HIGH

Effort: LOW

Plain English Business Explanation: Robots.txt is a text file on your server that tells search bots which pages they are allowed or forbidden to read.

Exact Crawled Evidence:
Robots.txt on `www.coursera.org` contains `Disallow` rules targeting AI crawlers (GPTBot/PerplexityBot).

Why Generative AI Engines Care:
If GPTBot or PerplexityBot are disallowed in robots.txt, ChatGPT and Perplexity are legally prohibited from scraping and citing your content.

Handed-To-You Fix: Robots.txt Blocking AI Search Crawlers Markdown HTML
